Contents of Volume 87

Number 1, 7 November 1980

[ARDT, S. L., A Measurable Consequence of the Mitchell Theory of Phosphorylation 1

/ICKEN, J. S., A Thermodynamic Theory of Evolution . . 9

JNGERMAN, R. L. and ROSENBLUM, B., Magnetic Induction for the Sensing of Magnetic Fields By Animals—An Analysis . . 25

ARLIN, S., Measures of Enzyme Co-operativity 33

RAIG, R., Sex Ratio Changes and the Evolution of Eusociality in the Hymenoptera: Simulation and Games Theory Studies . . 55

ENEST, M., VOVELLE, F., PTAK, M., MAIGRET, B. and PREMILAT, S., Hydration of Peptides. I. Calculation of Accessible Surface Areas for Several Conformations of a Cyclic Dipeptide . 71

OVELLE, F., GENEST, M., PTAK, M., MAIGRET, B. and PREMILAT, S., Hydration of Peptides. II. Determination of the Preferred Sites of Interactions of a Cyclic Dipeptide with Water . . . 85

MITH, R. J., Rethinking Allometry 97

ICCLENDON, J. H., The Evolution of the Chemical Isotopes as an Analog of Biological Evolution 113

UFFNER, J. A., SPERELAKIS, N. and MANN, J. E. JR., Application of the Hodgkin–Huxley Equations to an Electric Field Model for Interaction Between Excitable Cells 129

/HITEHEAD, E. P., Mixed and Uniform Co-operativity of Ligand Binding to Multisite Proteins: the Co-operativity Types Allowed by the Adair Equation and Conditions for Them . . . 153

LBERGHINA, L., MARIANI, L. and MARTEGANI, E., Analysis of a Model of Cell Cycle in Eukaryotes 171

PYSHNOV, M. B., Topological Solution for Cell Proliferation in Intestinal Crypt. I. Elastic Growth without Cell Loss . . 18

LETTERS TO THE EDITOR

KILTIE, R. A., Application of Search Theory to the Analysis of Prey Aggregation as an Antipredation Tactic . . . 20

MCCONNAUGHEY, W. 20

Number 2, 21 November 1980

BLOCH, R., INGRAM, D., SWEENEY, G. D., AHMED, K. and DICKINSON, C. J., MacDope: A Stimulation of Drug Disposition in the Human Body. Mathematical Considerations 21

FEDER, J., Random Sequential Adsorption 23

ROTHSTEIN, S. I., Reciprocal Altruism and Kin Selection Are Not Clearly Separable Phenomena 25

BOLDRINI, P., Ferroelectricity in the Arterial Wall: A New Physical Component of Atherosclerosis 26

TUCKWELL, H. C. and WAN, F. Y. M., The Response of a Nerve Cylinder to Spatially Distributed White Noise Inputs . . 27

EVANS, G. T., Instability Induced by Shear Diffusion . . . 29

SIMINOFF, R., Modeling of the Vertebrate Visual System. II. Application to the Turtle Cone Retina 30

HOMER, L. D. and WEATHERSBY, P. K., The Variance of the Distribution of Traversal Times in a Capillary Bed . . . 34

HINES, W. G. S., An Evolutionarily Stable Strategy Model for Randomly Mating Diploid Populations 37

ELDRIDGE, C. A., A Theory of Brownian Coagulation in a Bounded Planar Region 38

MOHAMMAD, S. N. and HOPFINGER, A. J., Chemical Reactivity of a Methyldiazonium Ion with Nucleophilic Centers of DNA Bases 40

Number 3, 7 December 1980

APENTIN, F., On Order and Complexity. I. General Considerations . 421

OSIN, R., The Honey-bee "Dance Language" Hypothesis and the Foundations of Biology and Behavior 457

AHON, G. A. T., MCWILLIAM, P., GORDON, R. L. and MCCONNELL, D. J., The Time Course of Transcription 483

HARLESWORTH, B., The Cost of Meiosis with Alternation of Sexual and Asexual Generations 517

INIS, G. S. and HAEFNER, J. W., A Neutral Model of Community Organization 529

AINS, N., The Determination of the Kinetic Parameters of a Carrier Mediated Transport Process in the Presence of an Unstirred Water Layer 559

AN, R. V., A Systemic Model of Growth in Botanometry . . 569

UANG, H. H., Chemical Reaction of DNA with Cross-linking Agents: Influences of Base Permutations on Chemical Reactivity 585

UANG, H. H., Detection and Differentiation of Cross-link Formation in an Eucaryotic DNA Population 597

RAMS, E. G., KAUFMANN, H. and BURNSTOCK, G., A Proposal for the Role of Ecto-enzymes and Adenylates in Traumatic Shock . 609

Number 4, 21 December 1980

RABHAKARAN, M. and PONNUSWAMY, P. K., Spatial Assignment of Amino Acid Residues in Globular Proteins: An Approach from Information Theory 623

RYAN, W. P., The Thermodynamics of Water–Protein Interactions 639

ALEKAR, S. V., MIKULECKY, D. C. and GARY-BOBO, C. M., A New Current Expression for Selective Ion Permeation across Membranes 663

REMERMANN, H. J., Sex and Polymorphism as Strategies in Host–Pathogen Interactions 671

CALLOW, R. S. and GLADWELL, I., Chromosome Synapsis in Hexaploids 70

BURRES, N. and DUNKER, A. K., Membrane Transport Through α-Heltical Bundles. IV. Preliminary Model Building Investigation of Helix–Helix Interactions 72

JOHNSON, E. A., CHAPMAN, J. B. and KOOTSEY, J. M., Some Electrophysiological Consequences of Electrogenic Sodium and Potassium Transport in Cardiac Muscle: A Theoretical Study 73

ELLIOTT, R. L., AMIDON, G. L. and LIGHTFOOT, E. N., A Convective Mass Transfer Model for Determining Intestinal Wall Permeabilities: Laminar Flow in a Circular Tube . . . 75

HORSFIELD, K., Are Diameter, Length and Branching Ratios Meaningful in the Lung? 77

HOEKSTRA, R. F., Why Do Organisms Produce Gametes of Only Two Different Sizes? Some Theoretical Aspects of the Evolution of Anisogamy 78

NAMBA, T. and MIMURA, M., Spatial Distribution of Competing Populations 79

LETTERS TO THE EDITOR

HARTUNG, J., Parent–Offspring Conflict—A Retraction . . 81

Index to Volume 87

lair equation, the co-operativity types allowed by, and conditions for them; mixed and unifrom co-operativity of ligand binding to multisite proteins, 153
lenylates and ecto-enzymes, a proposal for their role in traumatic shock, 609
lsorption, random sequential, 237
HMED, K. (see BLOCH, R.), 211
LBERGHINA, L., MARIANI, L. and MARTEGANI, E., Analysis of a model of cell cycle in eukaryotes, 171
lometry, rethinking of, 97
truism, reciprocal, and kin selection are not clearly separable phenomena, 255
MIDON, G. L. (see ELLIOTT, R. L.), 757
mino acid residues, spatial arrangement in globular proteins: an approach from information theory, 623
imals, magnetic induction for the sensing of magnetic fields by; an analysis, 25
isogamy, some theoretical aspects of the evolution of; why do organisms produce gametes of only two different sizes?, 785
terial wall, ferroelectricity in; a new physical component of atherosclerosis, 263
herosclerosis, a new physical component of; ferroelectricity in the arterial wall, 263

haviour and biology, the honey-bee "dance language" hypothesis and the foundations of, 457
ological evolution, the evolution of the chemical isotopes as an analog of, 113
ology and behavior, the honey-bee "dance language" hypothesis and the foundations of, 457
LOCH, R., INGRAM, D., SWEENEY, G. D., AHMED, K. and DICKINSON, C. J., MacDope: a stimulation of drug disposition in the human body, Mathematical considerations, 211
OLDRINI, P., Ferroelectricity in the arterial wall: a new physical component of atherosclerosis, 263
otanometry, a systemic model of growth in, 569
anching ratios, diameter and length, are they meaningful in the lung?, 773
REMERMANN, H. J., Sex and polymorphism as strategies in host–pathogen intreractions, 671
ownian coagulation in a bounded planar region, a theory of, 385
RYAN, W. P., The thermodynamics of water–protein interactions, 639
URNSTOCK, G. (see TRAMS, E. G.), 609
URRES, N. and DUNKER, A. K., Membrane transport through α-helical bundles. IV. Preliminary model building investigation of helix–helix interactions, 723

ALLOW, R. S. and GLADWELL, I., Chromosome synapsis in hexaploids, 703
pillary bed, the variance of the distribution of traversal times in, 349

Cardiac muscle, some electrophysiological consequences of electrogenic sodium an potassium transport in; a theoretical study, 737
Carrier mediated transport process in the presence of an unstirred water laye determination of the kinetic parameters of, 559
Cell cycle in eukaryotes, analysis of a model of, 171
Cell proliferation in intestinal crypt, topological solution for; elastic growth witho cell loss, 189
Cells, excitable, application of the Hodgkin–Huxley equations to an electric fie model for interaction between, 129
CHAPMAN, J. B. (see JOHNSON, E. A.), 737
CHARLESWORTH, B., The cost of meiosis with alternation of sexual and asexu generations, 517
Chemical reaction of DNA with cross-linking agents: influences of base perm tations on chemical reactivity, 585
Chemical reactivity of a methyldiazonium ion with nucleophilic centers of DN bases, 401
Chromosome synapsis in hexaploids, 703
Coagulation, Brownian, in a bounded planar region, a theory of, 385
Community organization, a neutral model of, 529
Competing populations, spatial distribution of, 795
Complexity and order: general considerations, 421
Cone retina, turtle, application of the modeling of the vertebrate visual system t 307
Convective mass transfer model for determining intestinal wall permeabilitie laminar flow in a circular tube, 757
Co-operativity, enzyme, measures of, 33
Co-operativity, mixed and uniform, of ligand binding to multisite proteins: t co-operativity types allowed by the Adair equation and conditions for them, 1
Cost of meiosis with alternation of sexual and asexual generations, 517
CRAIG, R., Sex ratio changes and the evolution of eusociality in the hymenopte simulation and games theory studies, 55
Cross-link formation in an eucaryotic DNA population, detection and differe tiation of, 597
Cross-linking agents, chemical reaction of DNA with; influences of base perm tations on chemical reactivity, 585
Culture media, neighbor distances in (letter), 819
Current expression, new, for selective ion permeation across membranes, 663
Cyclic dipeptide, calculation of accessible hydration surface areas for several co formations of, 71
Cyclic dipeptide, determination of the preferred sites of interactions of, with wat 85

"Dance language" honey-bee hypothesis and the foundations of biology a behavior, 457
DICKINSON, C. J. (see BLOCH, R.), 211
Diffusion, shear, instability induced by, 297
Diploid populations, randomly mating, an evolutionarily stable strategy model f 379

NA bases, chemical reactivity of a methyldiazonium ion with nucleophilic centers of, 401
NA, chemical reaction with cross-linking agents: influences of base permutations on chemical reactivity, 585
NA population, eucaryotic, detection and differentiation of cross-link formation in, 597
rug disposition in the human body, MacDope: a stimulation of; mathematical considerations, 211
UNKER, A. K. (see BURRES, N.), 723

cto-enzymes and adenylates, a proposal for their role in traumatic shock, 609
LDRIDGE, C. A., A theory of Brownian coagulation in a bounded planar region, 385
ectric field model for interaction between excitable cells, application of the Hodgkin–Huxley equations to, 129
ectrophysiological consequences of electrogenic sodium and potassium transport in cardiac muscle: a theoretical study, 737
LLIOTT, R. L., AMIDON, G. L. and LIGHTFOOT, E. N., A convective mass transfer model for determining intestinal wall permeabilities: laminar flow in a circular tube, 757
nzyme co-operativity, measures of, 33
ucaryotic DNA population, detection and differentiation of cross-link formation in, 597
ukaryotes, analysis of a model of cell cycle in, 171
usociality in the hymenoptera, sex ratio changes and the evolution of; simulation and games theory studies, 55
VANS, G. T., Instability induced by shear diffusion, 297
volution of anisogamy, some theoretical aspects of; why do organisms produce gametes of only two different sizes?, 785
volution of the chemical isotopes as an analog of biological evolution, 113
volution of eusociality in the hymenoptera, sex ratio changes and; simulation and games theory studies, 55
volution, a thermodynamic theory of, 9
volutionarily stable strategy model for randomly mating diploid populations, 379

EDER, J., Random sequential adsorption, 237
erroelectricity in the arterial wall: a new physical component of atherosclerosis, 263

AINS, N., The determination of the kinetic parameters of a carrier mediated transport process in the presence of an unstirred water layer, 559
ames theory and simulation studies of sex ratio changes and the evolution of eusociality in the hymenoptera, 55
ametes, why do organisms produce only two different sizes?. Some theoretical aspects of the evolution of anisogamy, 785
ARY-BOBO, C. M. (see TALEKAR, S. V.), 663
ENEST, M., VOVELLE, F., PTAK, M., MAIGRET, B. and PREMILAT, S., Hydration of peptides. I. Calculation of accessible surface areas for several conformations of a cyclic dipeptide, 71

GENEST, M. (see VOVELLE, F.), 85
GLADWELL, I. (see CALLOW, R. S.), 703
Globular proteins, spatial assignment of amino acid residues in; an approach fron information theory, 623
GORDON, R. L. (see MAHON, G. A. T.), 483
Growth in botanometry, a systemic model of, 569
Growth, elastic, without cell loss; topological solution for cell proliferation i intestinal crypt, 189

HAEFNER, J. W. (see INNIS, G. S.), 529
HARDT, S. L., A measurable consequence of the Mitchell theory of phos phorylation, 1
HARTUNG, J., Parent–offspring conflict—a retraction (letter), 815
α-Helical bundles, membrane transport through; preliminary model buildin investigation of helix–helix interactions, 723
Hexaploids, chromosome synapsis in, 703
HINES, W. G. S., An evolutionarily stable strategy model for randomly matin diploid populations, 379
Hodgkin–Huxley equations, application to an electric field model for interactio between excitable cells, 129
HOEKSTRA, R. F., Why do organisms produce gametes of only two different sizes Some theoretical aspects of the evolution of anisogamy, 785
HOMER, L. D. and WEATHERSBY, P. K., The variance of the distribution c traversal times in a capillary bed, 349
Honey-bee "dance language" hypothesis and the foundations of biology an behavior, 457
HOPFINGER, A. J. (see MOHAMMAD, S. N.), 401
HORSFIELD, K., Are diameter, length and branching ratios meaningful in the lung 773
Host–pathogen interactions, sex and polymorphism as strategies in, 671
HUANG, H. H., Chemical reaction of DNA with cross-linking agents: influences c base permutations on chemical reactivity, 585
HUANG, H. H., Detection and differentiation of cross-link formation in an eucar otic DNA population, 597
Human body, MacDope: a stimulation of drug disposition in the human bod mathematical considerations, 211
Hydration of peptides. I. Calculation of accessible surface areas for several co formations of a cyclic dipeptide, 71
Hydration of peptides. II. Determination of the preferred sites of interactions of cyclic dipeptide with water, 85
Hymenoptera, sex ratio changes and the evolution of eusociality in; simulation an games theory studies, 55

Information theory approach to the spatial assignment of amino acid residues globular proteins, 623
INGRAM, D. (see BLOCH, R.), 211
INNIS, G. S. and HAEFNER, J. W., A neutral model of community organization, 52
Instability induced by shear diffusion, 297

estinal crypt, topological solution for cell proliferation in; elastic growth without ell loss, 189
estinal wall permeabilities, a convective mass transfer model for determination of; aminar flow in a circular tube, 757
permeation, selective, across membranes, a new current expression for, 663
topes, chemical, the evolution of, as an analog of biological evolution, 113

AN, R. V., A systemic model of growth in botanometry, 569
HNSON, E. A. CHAPMAN, J. B. and KOOTSEY, J. M. Some electrophysiological onsequences of electrogenic sodium and potassium transport in cardiac muscle: a heoretical study, 737

ANN, J. E. JR. (see RUFFNER, J. A.), 129
ARIANI, L. (see ALBERGHINA, L.), 171
ARTEGANI, E. (see ALBERGHINA, L.), 171
ss transfer model, convective, for determining intestinal wall permeabilities: aminar flow in a circular tube, 757
ting, random, in diploid populations, an evolutionarily stable strategy model for, 79
iosis with alternation of sexual and asexual generations, the cost of, 517

Membrane transport through α-helical bundles; preliminary model buildir investigation of helix–helix interactions, 723
Membranes, a new current expression for selective ion permeation across, 663
Methyldiazonium ion, chemical reactivity with nucleophilic centers of DNA base 401
MIKULECKY, D. C. (see TALEKAR, S. V.), 663
MIMURA, M. (see NAMBA, T.), 795
Mitchell theory of phosphorylation, a measurable consequence of, 1
MOHAMMAD, S. N. and HOPFINGER, A. J., Chemical reactivity of a methy diazonium ion with nucleophilic centers of DNA bases, 401
Muscle, cardiac, some electrophysiological consequences of electrogenic sodium ar potassium transport in; a theoretical study, 737

NAMBA, T. and MIMURA, M., Spatial distribution of competing populations, 79
Neighbor distances in culture media (letter), 819
Nerve cylinder, response to spatially distributed white noise inputs, 275
Neutral model of community organization, 529
Nucleophilic centers of DNA bases, chemical reactivity of a methyldiazonium ic with, 401

Order and complexity: general considerations, 421

PAPENTIN, F., On order and complexity. I. General considerations, 421
Parent–offspring conflict—a retraction (letter), 815
Pathogen–host interactions, sex and polymorphism as strategies in, 671
Peptide hydration. I. Calculation of accessible surface areas for several co formations of a cyclic dipeptide, 71
Peptide hydration. II. Determination of the preferred sites of interactions of a cycl dipeptide with water, 85
Permeabilities, intestinal wall, a convective mass transfer model for determinatic of; laminar flow in a circular tube, 757
Permeation, ion, selective, across membranes, a new current expression for, 663
Phosphorylation, a measurable consequence of the Mitchell theory of, 1
Polymorphism and sex as strategies in host–pathogen interactions, 671
PONNUSWAMY, P. K. (see PRABHAKARAN, M.), 623
Potassium and sodium transport, electrogenic, in cardiac muscle, some ele trophysiological consequences of; a theoretical study, 737
